

Tyre Protection & Traction Chains

In collaboration with Retezarna a.s. company (www.retezarna.cz) from Czech Republic, TranzTel Technologies India brings in world class tyre protection and traction chain products. These welded-chain products find wide range applications in Steel Plants & Mines, Marble Quarries, Snowy & Slurry Tracks or Scrap Yards. The primary objectives of the protective chains are to protect the vehicle rubber tyres from extreme abrasion, cuts or punctures. Additionally, improved adhesion quality gives better loading performance with reliability. Better grips with slippery / slurry surfaces provides additional traction to vehicle tyres, resulting in lesser skidding and accidents.

Protection & Traction chains, varying from $\varnothing 2\text{mm}$ – $\varnothing 60\text{mm}$, are sold in meters or in exact sections to meet customer demands. The supplies necessarily include accessories like hooks, shackles, connectors and onsite installation services. Repair & maintenance guidance also form a part of our offerings.
