

## Wind Tamers & Dust Arresters

Dust is a nuisance and a serious health hazardous. It must be controlled properly. The industries we serve always generate enormous amount of dusts during their normal operations. Typically the potential points of such fugitive dust generation are loading & dumping stations, crushing points, transfer points, open stockyards etc. The Wind Tamers can be constructed in these places to regulate wind speed and arrest suspended dust particles. The purpose-built fabric is self-cleaning and can last for years with proper maintenance.

We provide complete solutions to effectively control these generated dusts with our specialized taming systems.

70% Wind Passage

Fabric Rolls

30% Wind Passage
